DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-5 and 7** are rejected under 35 U.S.C. 103(a) as being

unpatentable over Zeiler et al. 6,301,790 in view of Omi 5,074,179.

Zeiler et al. discloses a circular saw having the claimed elements that include a housing, a motor a saw blade; and the depth of the of a cut may be adjusted by manipulating the footplate that swivels relative to the saw assembly. Zeller does not specifically disclose decoupling the assembly from handling forces that act on the saw blade; and the handle is fixedly supported relative to the footplate independently from the saw assembly. Omi discloses a damping apparatus that separates the forces that act on the saw blade from the saw assembly so as to ensure steady operation of the tool and improve the quality of cut. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the saw of Zeller et al. to have a damping apparatus as taught by Omi so as to stabilize the operation of the tool and improve the quality of cut.

3. **Claims 6 and 8-10** are rejected under 35 U.S.C. 103(a) as being

unpatentable over Zeller in view of Omi and in further view of Smith 7,255,144.

Art Unit: 3723

Zeller as modified is described above. The modified Zeller does not disclose a ball and detent to isolate the vibration forces. Smith discloses an apparatus that implements a ball and detent configuration to isolate vibration forces in order to maximize the efficiency of the cutting operation. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the apparatus of the modified Zeller to implement a ball and detent configuration to isolate vibration forces in order to maximize the efficiency of the cutting operation.

Response to Arguments

4. Applicant's arguments filed 7/29/08 have been fully considered but they are not persuasive.

In response to applicant's arguments that US Patent 6,301,790 (to Zeller et al.) in combination with US Patent 5,074,179 (to Omi) does not teach an anti-kickback system which would enable the saw blade to react into minimal cutting depth and to decouple from the handle, applicant has not claimed the structure that so enables the saw. The claims are read in light of the specification but the contents of the specification are not read into the claims.

In response to applicant's arguments that US Patent 7,255,144 (to Smith) that is unable to perform *any kickback* to the user, it seems that applicant intended the statement to read *anti-kickback*. The Smith reference was not used for that purpose. Please see above.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
